

## **How to fix motion detection problems with Vivotek FD8136**

If you're having problems with moving and resizing the motion detection box there is a simple solution to fixing this.

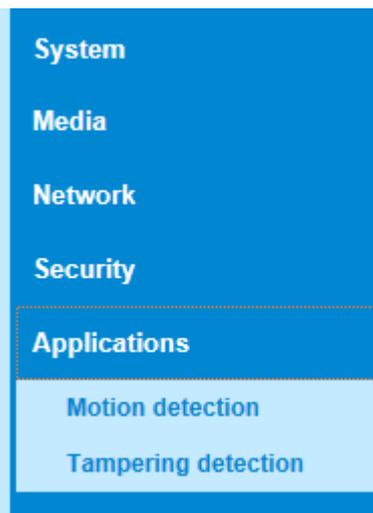

Open the camera in IE (Internet Explorer).

Click configuration.

Next Click the Applications drop down.

Now select motion detection.

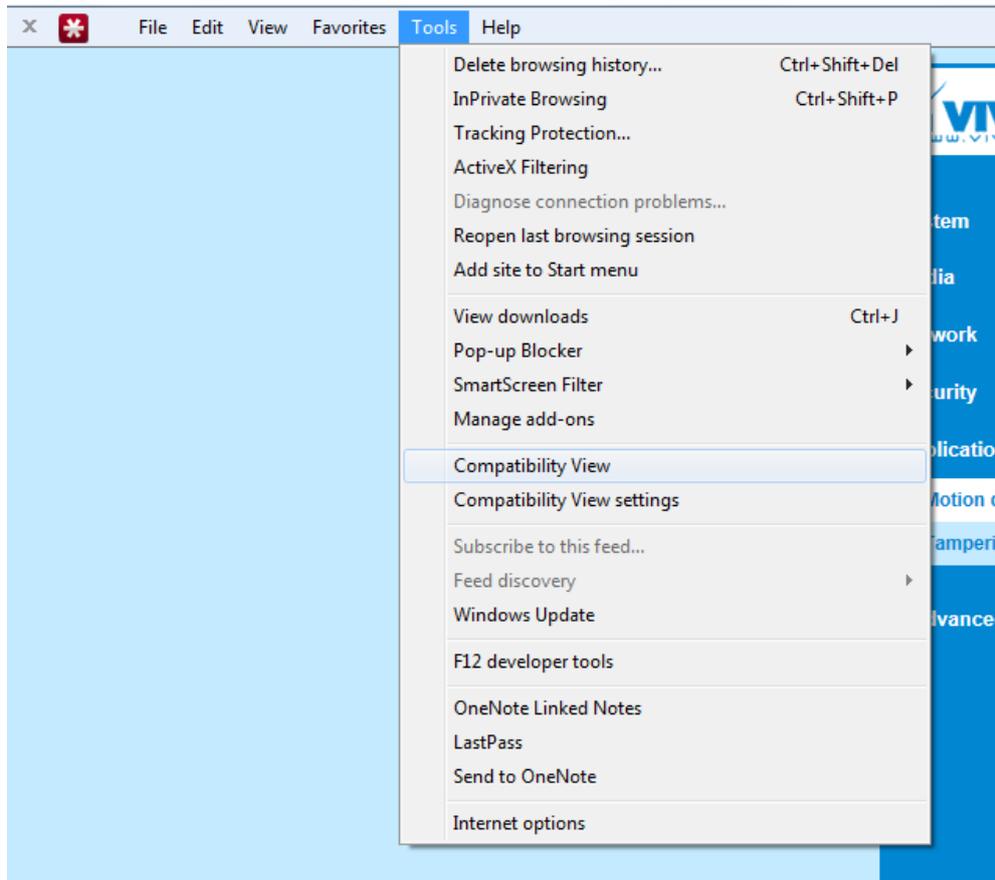

Enable motion detection

A screenshot of a motion detection configuration window. On the left is a video feed labeled '(TCP-V)' with a timestamp '12/02/2013 21:22:23'. A blue box with a white 'x' is overlaid on the video. On the right are controls: 'Window name:' with an empty text box, 'Sensitivity: 0%' with a slider, and 'Percentage: 0%' with a slider. Below the sliders are 'New' and 'Save' buttons, and an empty text box.

Profile

As you can see the box will not move at all.

To fix this click tools at the top of the page (IE tools, not Vivotek tools.)

Now click 'compatibility view. By checking this box will allow you to move around and resize your motion detection box.
